

MEMO

Date: October 26, 2022 **Project No.:** 220082
To: Mr. Damon Qualls, Public Works Director
From: Spencer Supinger, PE, ENV SP
Subject: 2022 City of Exeter Speed Zone Study
cc: Kevin Gross, PE, John Doyel, PE

This memorandum outlines the engineering and traffic survey conducted at various locations throughout the City of Exeter, California, to recommend appropriate speed zones for the studied roadways. Each location was divided into both directions of travel to ensure the street segments having unique characteristics were individually surveyed. This analysis and recommendations for speed zones followed the California Vehicle Code (CVC) requirements and the California Manual on Uniform Traffic Control Devices (CA MUTCD).

Background

Chapter 7 of Division 11 of the CVC deals with speed laws. Per CVC Section 22357, whenever a local authority determines "... upon the basis of an engineering and traffic survey, that a speed greater than 25 miles per hour would facilitate the orderly movement of vehicular traffic and would be reasonable and safe... (it) ... may by ordinance determine and declare a prima facie speed limit of 30, 35, 40, 45, 50, 55, 60 miles per hour, or a maximum speed limit of 65 miles per hour, whichever is found most appropriate to facilitate the orderly movement of traffic and is reasonable and safe."

Data Collection and Analysis

Metro Traffic Data collected field data for the (20) locations shown below between Thursday, May 26, 2022, and Tuesday, May 31, 2022. Additional data was collected on September 7, 2022 for the addition of Glaze Avenue from Belmont Avenue to State Route 65. Data for each zone was collected using a radar traffic speed meter. Data collected was recorded on the Vehicle Speed Survey Sheets that are attached. Each radar speed check was made by consultant personnel from an inconspicuously parked, unmarked vehicle. An effort was made to ensure that the vehicle's presence in no way affected the speed of the surveyed traffic.

List of Locations

1. Firebaugh Avenue between Belmont Road and State Route 65
2. Firebaugh Avenue between State Route 65 and the railroad tracks east of State Route 65 (east City limits)
3. Filbert Road between Glaze Avenue and Firebaugh Avenue
4. Vine Street between Elberta Road and Belmont Road
5. Visalia Road between the west City limit and 1,370 feet east of the west City limit
6. Visalia Road between 1,370 feet east of the west City limit and Orange Avenue
7. Visalia Road between Orange Avenue and Palm Street
8. Chestnut Street between Belmont Road and Albert Avenue

9. Chestnut Street between Orange Avenue and Kaweah Avenue (State Route 65)
10. Chestnut Street between Kaweah Avenue (State Route 65) and 1st Street
11. Elberta Road between Visalia Road and Vine Street
12. Belmont Road between Glaze Avenue and Firebaugh Avenue
13. Belmont Road between Firebaugh Avenue and Visalia Road
14. Belmont Road between Visalia Road and the railroad tracks north of Meadow Avenue (north City limit)
15. Sequoia Drive between Kaweah Avenue (State Route 65) and Valencia Drive
16. Palm Street between Orange Avenue and G Street
17. Palm Street between G Street and Kaweah Avenue (State Route 65)
18. F Street between Palm Street and the curve north of Willow Street
19. F Street/Filbert Road between the curve north of Willow Street and the north City limit
20. Industrial Drive between Firebaugh Avenue and Glaze Avenue
21. Glaze Avenue between Filbert Road and State Route 65
22. Glaze Avenue between Belmont Drive and Filbert Road

The data includes the location of the speed survey, date and time, direction of traffic observed (“Band” means both directions), number of lanes, paved roadway width, posted speed limit, weather, and whether the segment is in a business district, residential district, or school zone.

The matrix in the middle of the form shows an “X” each time a vehicle was recorded at the corresponding speed. These vehicles are totaled in the first column at the right of the matrix. The cumulative total is tallied in the second column, and the cumulative percentage is calculated in the third column.

The lower body of the form consists of a summary table of various calculated parameters. An explanation of the data and terms follows:

- The assumed speed limit without an approved speed zone is given based on the segment lying within a business district, residential district, or school zone.
- The average speed is the total of all the vehicle speeds divided by the number of vehicles in the sample.
- The 10 MPH pace speed is the 10 miles per hour increment of observed speeds, which contains the greatest number of vehicles. In nearly all cases, the 85th-percentile speed and the recommended speed limit lie somewhere within the pace, frequently in the middle to upper ranges. This is an important indicator used to determine appropriate speed limits.

The number of vehicles within the pace is an indication of the bunching of vehicular speeds. Ideally, if all vehicles were traveling at or about the same speed, there would be

a reduced likelihood of traffic collisions. In speed limit analysis, the higher the number (percentage) of vehicles within the pace, the better the speed distribution.

- The *critical (85%) speed* (or 85th-percentile speed) is that speed at or below which 85 percent of the observed vehicles are traveling. The 85th-percentile speed is the primary indicator of a speed limit that might be imposed subject to the secondary factors of collision experience and highway, traffic, and roadside conditions not readily apparent to the driver.

Per the CA MUTCD, a posted speed limit “**shall** be established at the nearest 5 mph increment of the 85th-percentile speed of free-flowing traffic, except as shown in the two options below.”

Option

1. The posted speed may be reduced by 5 mph from the nearest 5 mph increment of the 85th-percentile speed, in compliance with CVC Sections 627 and 22358.5.
2. For cases in which the nearest 5 mph increment of the 85th-percentile speed would require rounding up, then the speed limit may be rounded down to the nearest 5 mph increment below the 85th-percentile speed, if no further reduction is used. Refer to CVC Section 21400(b).

Also, per the CA MUTCD, if the posted speed limit “has had the 5 mph reduction applied, then an engineering and traffic survey **shall** document in writing the conditions and justification for the lower speed limit and be approved by a registered Civil or Traffic Engineer.”

Results

Direction	Current Speed Limit (MPH)	Average Speed (MPH)	10 MPH Speed (MPH)	Critical 85 th % Speed (MPH)	Recommended Speed Limit
Firebaugh Avenue Belmont Road/SR 65 (School Zone)					
All	30	31	25-34	36	30

Belmont Drive / Filbert Road					
All	N/A	34	30-39	41	35
A 5 MPH reduction is allowed under CVC 627 due to residential density.					

*See appendix for all recorded information.

Collision Review

Per the CA MUTCD, the most recent two-year collision records should be reviewed when determining appropriate speed limits. Collision data was obtained from the California Highway Patrol’s State-Wide Integrated Traffic Records System (SWITRS) for the years 2020 and 2021. During this two-year period, there were no collisions on the road segments surveyed resulting in fatalities. Therefore, a speed reduction based on collision history is not recommended for the roadway segments studied.

Conclusion

Based on the speed data collected and a review of the collision history and conditions not readily apparent to the driver, the recommended speed limit for all 22 segments are shown in the above spreadsheet.

Attachment 1- Speed Survey Counts
